Natural Foods

Everything You Need

A complete AI toolkit for natural food shelf life prediction — built for HimShakti's production team.

Predict Shelf Life

Enter your recipe and processing details. AI calculates exact shelf life in minutes — no lab required.

AI Powered

Risk Warnings

Get instant alerts for high moisture, dangerous ingredient combinations, and fermentation risks.

Improvement Tips

Receive actionable suggestions to extend shelf life naturally — more vinegar, less moisture, better packaging.

Accurate Expiry Dates

Generate label-ready "Best Before" dates based on real food science, not guesswork.

New

Sourcing Insights

Factor in farm altitude, harvest freshness, and transport distance into your prediction.

Packaging Impact

Compare glass jar vs vacuum pouch vs plastic bottle — see exactly how packaging changes shelf life.

About This Project

Understanding the mission behind the AI-Based Food Shelf Life Prediction System.

About HimShakti

HimShakti Food Processing is a company based in Uttarakhand that produces natural Himalayan food products — millet snacks, fruit pickles, and cold-pressed juices — using traditional recipes with **no** chemical preservatives.

The Problem

Without chemical preservatives, shelf life varies for every batch depending on ingredients, processing method, and packaging. HimShakti's production team currently estimates expiry dates manually — causing food waste, customer complaints, and inconsistent labeling.

Large companies use expensive lab testing. No affordable tool exists for small food companies in India.

Our Solution

This web application allows production staff to enter recipe and processing details, and uses the **Google Gemini AI API** to predict exact shelf life — giving the correct expiry date, risk warnings, and suggestions to make products last longer naturally.

Analysis Dashboard

Shelf life analysis form and results will appear here in Week 3 after Gemini AI integration.

Shelf Life Analysis Form

The 6-section ingredient form and AI prediction results will be built here in **Week 3** of the internship. This includes:

- ✓ Product Identity (Section 1)
- ✓ Raw Material Sourcing (Section 2)
- ✓ Ingredient Composition with sliders (Section 3)
- ✓ Processing Method (Section 4)
- ✓ Packaging & Storage (Section 5)
- ✓ Additional Notes (Section 6)
- 🤖 Gemini AI shelf life prediction result
